CLOUD COMPUTING
FOR **TRANSFORMATION**

YOUR TICKET TO FLY
TO ANY CLOUD AND ARCHITECTURE YOU WANT TO GO TO

VMware Cloud Foundation™ with Tanzu

☁ ANY CLOUD TYPE

▨ ANY APPLICATION

⬙ ONE FOUNDATION

if **Cloud** is your destination,
VMware is the vehicle and
Performance is your co·pilot

VMware Cloud Foundation with Tanzu is the only cloud solution that allows you to **get where you want in-time instead of in a rush**. You can grow your cloud infrastructure and your modern apps progressively, and quickly, and fine-tune your approach while on your journey, and as demands change.

You immediately get market leading **hyperconverged infrastructure**, the ability to move existing enterprise apps to a **custom-designed hybrid cloud** of your own, and a world–class **modern application** environment.

No enterprise should have to make a leap into a single cloud topology, or choose a restrictive path to their transformation journey.

THE ONLY CLOUD PLATFORM THAT GETS YOU WHERE YOU WANT **QUICKLY, *NOT HASTILY***

Agility · Deploy services from anywhere using a unified cloud platform that runs on any infrastructure. You can choose the best environment or destination for your application, on or off-premises.

Speed · Enjoy faster service delivery and time to modernization with integrated Kubernetes capabilities for cloud-native application development. Leverage and extend existing IT resources and skills to new capabilities.

Control – Streamline management and free up resources and time to enable new IT service delivery. Reduce risk and total costs with deep visibility from application to infrastructure, automation, and ops across multi-cloud environments.

VMware Cloud Foundation with Tanzu offers a unique blend of capabilities that allow you to:

1. Choose and combine from **any cloud topology** you wish to go with. Change it at any time you want to go another direction.

2. Deploy enterprise applications and workloads, and modern container-based apps and services on the same platform.

3. Get secure and nimble interoperability between containerized apps and existing enterprise applications and stateful workloads.

4. Empower your app teams to quickly provision the compute, storage, and networking resources they need through a standard API.

5. Let operations manage all applications and infrastructure, across any complex hybrid cloud environment, using a single interface.

6. Set and enforce security, privacy, utilzation and other governance policies via a common toolset for all applications and IT resources.

VMware Cloud Foundation™ with Tanzu allows you to transform to and combine any cloud architecture

> **A cloud platform that can reshape according to your needs –at any point in your cloud journey– is vital to your transformation efforts.**

VMware Cloud Fondation with Tanzu is a truly strategic lever which allows you to keep your options open when it comes to your cloud strategy, and on how you opt to change it in the future. It also offers stellar protection from vendor lock-in and proprietary software stacks.

After all, agility is about getting results as soon as possible, while maintaining the flexibility to alter your course with minimal disruption when the need arises.

Key benefits of VMware Cloud Foundation™ with Tanzu

- Application-focused management for VMs & containers

- Enterprise-class resiliency, QoS, security, and access control for VMs & containers

- Developer self-service APIs to boost productivity

- Rapid application deployment with full stack agility

- Enhanced infrastructure lifecycle management

- Full stack networking and intrinsic security at every layer of the stack

- Cloud operating model extending across private and hybrid cloud

Going on a *cloud*-journey? We are your co·pilot.

Performance offers a comprehensive portfolio of professional, support, and education services and provides complete custom—made HCI and Cloud "as-a-Service" solutions to organizations looking for more flexible financial and operational models.

We understand that every transformation journey and cloud strategy is unique, so we work with you to design an agile architecture that will be powerful enough to carry you into the future while also supporting your first —or next— steps.

With VMware Cloud, you will find that we can discuss and implement your custom target environment, regardless if you are aiming for hyper-converged infrastructure, a gradual switch to hybrid cloud, or an even more ambitious shift to a cloud-native software platform.

Build

We will typically begin with a readiness assessment, design and implement the solution that best fits your immediate needs and future goals, and help with the migration of certain workload types.

Run

As we all know, IT is about people, so we take the extra time to onboard your engineers and operators, and we also offer official VMware training programs to help your team get the best out of your investment. And, of course, we remain by your side, offering support, maintenance, and other relevant services.

Save

As mentioned, we can talk about various cost and operating models and find the one that fits your exact requirements. As **engineers**, we focus on building the right technical solution for your needs. However, we also wear our "**business** hat" to find the best solution in terms of cost and resource allocation.

OUR ADDED VALUE IN A NUTSHELL

Focused on your operational & business goals

Tailored to your environment and needs

Reliable and flexible **project management**

Expert, non-disruptive, **implementation**

User and operator **onboarding and training**

Customized support level agreements

Flexible cost & operational models
